Hello,

The following submission has been created.

Track Name: IC3IT2025

Paper ID: 1220

Paper Title: Real-Time Cricket Intelligence Platform

Abstract:
This paper aims at improving the analytical approach
towards T20 cricket by providing real-time information.
In particular, the implementation result published via this research work will display live scores of all the games in action together with animated statistical charts targeting not only fans but also industry players. Analysis is also provided before the match and suggestions given on the call to bat or bowl first based on points discussed with respect to historical performance of the team in a particular ground and environmental setup. Further, a machine learning model will also be created to predict, in real time, the likelihood that a team is going to ace the pursuit in the second innings and these estimates will be updated after each delivery.
